## **DETAILED ACTION**

### Claim Rejections - 35 U.S.C. § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham v. John Deere Column.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was

made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 19-29 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Killat et al., US Patent No. 4,416,729.

Killat et al. teach a wet strength additive which is the a cationic nitrogen containing additive, a polyamidoamine, branched with a hydrophobic agent, a Quaternary ammonium compound, see abstract. Killat et al. also teach that the polyamidoamine is crosslinked with an epoxy agent and used as a wet strength agent in a papermaking pulp, see abstract. Killat et al. teach the use if a ethylentically unsaturated carboxylic compound to produce the side chain and then the side chain is quaternized to obtain the final product, see column 4, line 18 through column 7, line 13. They also show the addition amount within the claimed range, see column 7, lines 26-60. It seems that Killat et al. teach all the limitations of the claims or at least the minor modification to obtain the claimed invention would have been obvious to one of ordinary skill in the art. Note that one of ordinary skill in the art would have reasonable expectation of success if the wet strength agent disclosed by the reference, Killat et al., is used in any papermaking process in which a wet strength is needed.

#### Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the art of "Wet Strength Agents."
